

Onduu Strategy — Current Version

Effective: 18 August 2026

Status: Current strategic direction; supersedes conflicting parts of the 15 August website blueprint and definitive build brief.

1. Strategic role

Onduu is a **Digital Readiness education, assessment and decision-routing platform for Kenyan businesses.**

It helps a business:

1. understand what is weakening its website or wider digital operation;
2. identify the three issues worth investigating first;
3. understand who should be responsible for fixing them;
4. continue through the appropriate delivery path; and
5. verify whether the chosen intervention worked.

Onduu is not positioned as another web-design agency, hosting reseller, managed-service provider or AI-agent operator.

Positioning statement

Onduu helps Kenyan businesses understand what is weakening their digital operation, decide what to fix first and continue through the right delivery path.

One-line description

Practical Digital Readiness guidance for better website and infrastructure decisions.

Brand promise

Start with evidence, understand the responsibility and spend money on the right fix.

2. Primary customer

The primary customer remains an established Kenyan SME or professional-services business, typically with approximately 10–100 employees, where the website influences trust, enquiries, sales, recruitment, bookings or customer service.

The likely buyer is a managing director, founder, operations lead, marketing lead or IT decision-maker who suspects that:

- the website is not converting;
- ownership of domains, hosting, analytics or accounts is unclear;
- enquiries may be getting lost;
- email trust, speed or resilience is weak;
- infrastructure decisions are being made without enough evidence; or
- the business wants to introduce automation or agents safely.

Onduu is not primarily for the price-led buyer looking only for the cheapest five-page website.

3. Signature entry product

The **Digital Readiness assessment** is Onduu's primary product and the website's main conversion path.

It uses six dimensions:

1. **Control** — ownership, access, renewal responsibility, deputies and exit readiness.
2. **Trust** — identity, HTTPS, email authentication, privacy, claims and responsible data handling.
3. **Speed** — mobile experience, response performance and avoidable delivery friction.
4. **Conversion** — message clarity, calls to action, forms, proof and enquiry journeys.
5. **Resilience** — backups, restoration, monitoring, escalation and continuity responsibility.
6. **Agent readiness** — bounded workflows, permissions, supervision, auditability and rollback.

Two-stage assessment model

Stage 1 — Instant Public Readiness Scan

- A visitor enters only a domain.
- Onduu performs safe, low-impact public observations.
- The result may show a **Public Signal Score** and **Evidence Coverage**.
- It must show unavailable private evidence as unverified, not as a pass or failure.
- It is not a penetration test, legal opinion, compliance certificate or complete readiness score.

Stage 2 — Verified Digital Readiness Score

- Requires a business questionnaire, documentary evidence, human review and separately authorised tests.
- Can examine ownership, form delivery, analytics, restoration, access controls and agent governance.
- Remains “**Not completed**” until that work has genuinely occurred.

The scoring must be deterministic, configuration-driven and versioned. An LLM may explain findings, but it must not invent evidence or assign the numerical score.

The earlier provisional **61/100** assessment of `onduu.ke` is an internal manual example, not an official engine result.

4. The three-party operating model

Onduu

Onduu:

- educates;
- assesses Digital Readiness;
- publishes frameworks, guides, tools and evidence;
- helps a business prioritise decisions;
- routes demand to the appropriate provider; and
- does not contract, invoice, manage or guarantee independent implementation in the current model.

Ujiajiri

Ujiajiri is a separate skills, self-employment and independent-partner platform.

It:

- develops practical youth and apprentice pathways;
- provides a directory of reviewed independent implementation partners;
- helps businesses discover possible website and digital-marketing providers; and
- does not initially act as prime contractor or collect client project payments.

The business chooses, contracts and pays the partner directly. The partner is responsible for its scope, price, delivery, warranty and support. Onduu and Ujiajiri must not guarantee the partner's work.

HOSTAFRICA

HOSTAFRICA remains the provider, seller, biller, provisioner, renewer and supporter of HOSTAFRICA domains, hosting, email and VPS products.

Onduu may explain use cases and route an interested visitor through an approved official destination. It must not imply that Onduu or Ujiajiri supplies or supports those products.

Wycliffe's role as Managing Director of HOSTAFRICA Kenya, and any commission, referral benefit, sponsorship or other material relationship, must be disclosed at the relevant decision point.

HOSTAFRICA logos, product training, endorsements, tracked routes and programme claims remain gated until approved.

5. Customer journey

The current journey is:

text

Understand the problem

↓

Check Digital Readiness

↓

Prioritise the three most important questions

↓

Choose the responsible path

├─ Ujiajiri independent partner for implementation

└─ Official HOSTAFRICA route for infrastructure

↓

Agree how the result will be verified

Copy code block

Primary CTA

Check Your Digital Readiness

Secondary CTA

Find an Implementation Partner

Infrastructure CTA

Explore the HOSTAFRICA Path — only after the exact destination, tracking and wording are approved.

6. Website role and structure

The website should not lead with Wycliffe, HOSTAFRICA, Buzz, VPS products, AI or a catalogue of tools. The customer is the hero; Onduu is the guide.

The homepage should answer:

- What may be going wrong?
- Why does it matter commercially?
- What can Onduu help me understand?
- What happens after the assessment?
- Who is responsible for delivery?

Recommended navigation:

- Readiness
- How It Works
- Paths

- Guides
- About

Recommended route structure:

```

├── /labs/
├── /about/
├── /contact/
└── /legal/
```

Copy code block

The **Website Revenue System** remains useful, but as an Onduu framework or guide—not as a promise that Onduu will implement it.

7. Content and demand strategy

Onduu should build authority through practical, trigger-based guidance rather than generic digital-marketing content.

Priority topics include:

- what happens when a developer or key employee disappears;
- who controls the domain, DNS, website and analytics;
- why an enquiry form can appear to work while losing leads;
- SPF, DKIM and DMARC and what they do not prove;
- backup versus tested restoration;
- choosing Kenyan VPS infrastructure and understanding data location;
- what an always-on agent requires beyond a VPS;
- supervised agents, least privilege, human approval and rollback;
- website handover and vendor-exit readiness; and
- conversion measurement based on actual business outcomes.

Useful public programmes remain:

- Developer Disappeared Test;
- Invisible Lead Leak Review;
- Restore, Don't Assume Drill;
- Kenyan Data Journey Map;
- Conversion Forensics;
- Buzz Fit Lab;
- Agent Readiness Workshop;
- Kenya Website Reliability Index; and
- public fix clinics.

At first, these should be educational methods, controlled demonstrations or approved labs—not unsupported service promises.

8. Evidence and claims standard

Onduu's differentiator should be disciplined evidence, not broad claims.

Every important result should state:

- source;
- date;
- scope;
- method;
- confidence;
- what was not tested; and
- the business consequence.

Onduu must not promise guaranteed security, compliance, rankings, leads, revenue, uptime, recovery or agent accuracy.

Do not invent partner identities, testimonials, case studies, prices, certifications, response times, registrations, approvals or results.

9. Privacy and routing principles

- Collect only information needed for the stated purpose.
- Do not require a name or email merely to display the first public scan.
- Do not automatically send assessment answers to Ujiajiri partners or HOSTAFRICA.
- Prefer outbound links at launch.
- Any later data transfer requires clear notice, a defined basis and appropriate consent.
- Onduu and Ujiajiri require separate metadata, canonical URLs, sitemaps, analytics identifiers and Search Console properties.
- Do not duplicate full articles across the two sites.

10. Measures of success

The first useful measures are:

- readiness scans or assessment starts;
- completed reviewed-assessment requests;
- qualified clicks to Ujiajiri partners;
- approved HOSTAFRICA-path clicks;
- useful guide engagement;
- completed enquiries;
- evidence that visitors understood the correct responsibility; and
- later, verified improvements following an intervention.

Traffic alone is not the primary success measure.

11. Gated—not current public offers

Do not publish these as active Onduu offers until separately approved, staffed and contractually supported:

- Managed Website Operations;
- Onduu-delivered Website Revenue System projects;
- direct website or digital-marketing implementation by Onduu;
- direct agent implementation or management;
- client VPS administration or infrastructure support;
- Ujiajiri-managed client matching or project management;
- public youth enrolment beyond a controlled interest process;
- HOSTAFRICA-branded training or certification;

- open, unreviewed partner submissions;
- unapproved affiliate or commission claims; and
- production release of the public scanner before its security, scoring and privacy controls pass review.

12. Immediate strategic priorities

1. Make the current strategy authoritative in `CLAUDE.md`, `ROADMAP.md` and `REVIEW.md`.
2. Remove direct-delivery and managed-service claims from `onduu.ke`.
3. Separate Onduu and Ujiajiri technically and editorially.
4. Preserve the human-reviewed readiness route while the deterministic scan is built safely.
5. Publish the responsibility and commercial-relationship disclosures.
6. Establish two or three real reviewed Ujiajiri partners before promoting the directory.
7. Confirm the approved HOSTAFRICA destinations and tracking.
8. Build evidence through guides, methods and controlled examples.

13. Decisions still required from the owner

- Who will operate Ujiajiri day to day?
- Who are the first two or three implementation partners?
- Who approves, reviews and removes partners?
- Will Ujiajiri charge anything during the pilot?
- What are the confirmed company identity and contact details?
- Which HOSTAFRICA destination and commercial arrangement are approved?
- What youth age range, capacity and safeguarding rules will apply?
- What are the approved retention, deletion and consent rules?
- Which biography and commercial-disclosure wording is approved?
- Are any Onduu-delivered advisory services still intended, and if so, which exact services are approved and operationally supported?

What is new compared with the original strategy

Area	Original 15 August strategy	Current strategy
Onduu's role	Digital performance and infrastructure advisory brand that could diagnose and deliver fixes	Education, Digital Readiness, evidence and demand-routing platform
Core promise	"We find and fix"	"We help identify, prioritise and choose the right path"
Website work	Onduu could sell Conversion Website Sprints or a Website Revenue System	Independent Ujiajiri partners implement and contract directly
Ongoing service	Managed Website Operations and a Digital Performance Steward were proposed	Removed/gated until separately staffed, approved and contracted
Agents	Agent Workflow Pilot could become a direct offer	Guides, readiness assessment and controlled labs first; direct delivery gated
Ujiajiri	Secondary or under-defined	Separate youth, skills and independent-partner platform with its own site
HOSTAFRICA	Preferred/official infrastructure route	Explicit seller, biller, provisioner, renewer and supporter; disclosures required

Readiness product review	One six-part score combining observations and	Public Signal Score + Evidence Coverage + separate Verified Digital Readiness Score
Scoring	Assessor judgement could influence numerical dimensions	Deterministic, versioned rubric; LLM cannot assign scores
Missing evidence	Could be absorbed ambiguously into assessment judgement	Must remain unverified, error, not observed or requiring authorised evidence
Main conversion	Readiness Score leading into Onduu services	Readiness assessment leading into the responsible external path
Site architecture	One broad Onduu service site	Two distinct sites with separate purposes, SEO, analytics and disclosures
Content	Supports service sales	Builds authority, explains responsibilities and generates qualified routed demand
Privacy	General form/privacy controls	Explicit separation of data, consent and destinations; no automatic sharing
Governance	A build brief and approval gates	Persistent CLAUDE.md , phased ROADMAP.md and blocking REVIEW.md standard

What has not changed

The following original ideas remain strong:

- established Kenyan businesses remain the primary audience;
- the customer is the hero and Onduu is the guide;
- Digital Readiness remains the signature entry point;
- the six dimensions remain the organising framework;
- Kenyan infrastructure, data location, website ownership and resilience remain differentiators;
- Buzz and agents remain valuable content areas when presented responsibly;
- HOSTAFRICA remains the official infrastructure provider;
- claims must be evidence-based and commercially transparent; and
- the goal is measurable business usefulness, not generic web design or generic content marketing.

Board conclusion

This is an **evolution, not a rejection, of the original strategy**. The original discovered the right market problem, audience, readiness framework and content territory. The new strategy corrects the operating model so Onduu does not promise work it is not currently structured to deliver.

The authoritative short version is:

Onduu helps Kenyan businesses assess Digital Readiness, understand what matters, and choose the responsible delivery path. Ujiajiri connects businesses with independent implementation partners. HOSTAFRICA supplies and supports its infrastructure products.

This consolidation is based on the 15 August original blueprint and definitive build brief, the 16 August Onduu/Ujiajiri two-site decision, and the 18 August readiness-scoring clarification. Where they conflict, the later operating model above should win.
