

WEBSITE CONTENT + DEVELOPMENT HANDOFF

Onduu Definitive Website Content and LLM Build Brief

The approved strategic direction, sitemap, page-by-page copy, calls to action, visual system, technical architecture and implementation prompts for the new Onduu website.

CORE JOURNEY

Find the weakness. Fix the priority. Operate the system. Measure the result.

Prepared 15 August 2026

Document status: Implementation-ready draft, subject to the approval gates stated below.

**IMPLEMENTATION
BRIEF****1. Purpose of this document**

1. Purpose of this document

This is the single website-content and development brief for the new Onduu website. Give this document to the implementation LLM before it writes code.

It defines:

- business positioning;
- ideal customer;
- offer hierarchy;
- sitemap and navigation;
- exact page structure and draft copy;
- calls to action and forms;
- visual direction;
- content and SEO requirements;
- privacy, security and employment boundaries;
- technical architecture;
- phased implementation;
- acceptance criteria;
- the exact first prompt for the implementation LLM.

Where this brief conflicts with an earlier Onduu website brief, this document governs the website content and information architecture. Earlier research remains supporting evidence.

**IMPLEMENTATION
BRIEF****2. Non-negotiable approval gates**

2. Non-negotiable approval gates

The website can be designed and built in preview, but it must not be publicly deployed until the owner has resolved these items.

Employment and commercial relationship

Obtain written confirmation covering:

1. the website, conversion, measurement, marketing and advisory work Onduu may sell;
2. excluded hosting, VPS, domain, infrastructure-support and managed-agent work;
3. ownership and routing of HOSTAFRICA-related leads;
4. permission to use the HOSTAFRICA name, role, logo, links and product claims;
5. working-time, equipment, customer, confidentiality, commission and intellectual-property boundaries;
6. approval or exclusion of Managed Website Operations, Buzz pilots and client Digital Performance Stewards.

Until approved, mark infrastructure, Buzz deployment and managed-agent commercial copy as draft or hide those CTAs from production.

Claims and proof

Do not publish:

- fabricated case studies, scores, testimonials, logos, statistics or savings;
- unverified biography, certification, partner or performance claims;
- an instant-score promise before the workflow exists;
- "secure", "compliant", "guaranteed", "always on" or "all your data stays in Kenya" claims;
- a promise of 24/7 monitoring or remediation without contracted capacity;
- pricing before scope and operating cost are approved.

Legal content

Privacy, commercial-relationship, assessment-terms and managed-service wording requires legal/business review. Drafts may be built behind a preview gate.

IMPLEMENTATION
BRIEF

3. Strategic direction

3. Strategic direction

Category

Digital Readiness and Growth Systems

Plain-language descriptor

Website revenue and resilience for established Kenyan businesses.

Core promise

Turn your website from an online brochure into a trusted, measurable business system.

Full positioning statement

Onduu helps established Kenyan businesses find and fix the weaknesses costing their websites enquiries, trust, speed, control and resilience - then helps them operate and improve the system with clear evidence, human judgement and carefully supervised agents.

What Onduu is not

Onduu is not presented as:

- a cheap page-count web-design shop;
- a generic social-media agency;
- a cybersecurity auditor or compliance certifier;
- a hosting reseller operating independently of approved HOSTAFRICA arrangements;
- an autonomous AI platform that replaces responsible people;

- a dashboard factory.

The customer journey

Score

- > understand the three priorities
- > review the commercial and operational system
- > fix the right weaknesses
- > operate and measure continuously
- > introduce one controlled agent workflow where it fits

IMPLEMENTATION BRIEF

4. Ideal customer profile

4. Ideal customer profile

Primary client

An established Kenyan SME or professional-services organisation with approximately 10-100 staff and a website that materially affects enquiries, bookings, sales, recruitment, credibility or customer service.

Typical signs:

- the website is more than three years old or managed by an external developer;
- marketing activity exists, but qualified-lead attribution is weak;
- the form, inbox, CRM and follow-up path has not been tested end to end;
- mobile performance or message clarity is hurting confidence;
- domain, hosting, analytics, email, backups or administrator ownership is unclear;
- backups exist but restoration has not been proven;
- management wants useful AI adoption without uncontrolled automation;
- a managing director, operations leader, marketing leader or IT owner can approve action.

Deliberate non-customer

Do not optimise the site for the smallest buyer seeking the cheapest five-page website or a fixed number of social posts. The site should attract buyers who value commercial performance, operational control and continuing improvement.

Primary visitor questions

The website must answer:

1. Why is our website not producing enough useful business?
2. What is weak, broken, unowned or unproven?
3. Which three actions should we fund first?
4. Can Onduu fix the problem and measure the result?
5. What happens after launch?
6. How do Buzz and supervised agents help without creating new risk?
7. How are infrastructure needs handled responsibly?

5. Brand and voice

Brand idea

Quiet authority. Kenyan context. Measurable progress. Operational grit.

Voice

Write like an experienced operator briefing a managing director.

Use:

- direct British/Kenyan English;
- short paragraphs;
- specific business consequences;
- clear evidence and limitations;
- calm recommendations;
- "we found", "we tested" and "we measured" only when true.

Avoid:

- world-class;
- cutting-edge;
- revolutionary;
- seamless solutions;
- game-changing;
- unexplained acronyms;
- fear-based security language;
- generic AI enthusiasm;
- unsupported urgency.

Content hierarchy

Always preserve this order:

```
Customer outcome
> Onduu method
  > human judgement
    > Buzz operating workspace
      > agents and technical tools
```

Do not lead the homepage with Buzz, AI, Nostr, Cloudflare, Astro or technical product names.

6. Offer architecture

1. Digital Readiness Score

The entry diagnostic. It evaluates Control, Trust, Speed, Conversion, Resilience and Agent Readiness. The customer receives evidence labels, limitations and the three priorities that matter most.

Primary CTA: **Get Your Digital Readiness Score**

2. Digital Revenue and Risk Review

The paid diagnosis for businesses ready for deeper evidence, ownership mapping, lead-path tracing and a 30/60/90-day plan.

Primary CTA: **Book the Review**

3. Website Revenue System

The flagship transformation. It aligns the offer and brand, builds or improves the website, proves the enquiry path, establishes measurement, documents ownership and creates the operating foundation.

Primary CTA: **Plan My Website Revenue System**

4. Managed Website Operations

The recurring service. It monitors the system, maintains brand and content consistency, identifies exceptions, supports experiments, produces executive reports and provides a supervised Digital Performance Steward where approved.

Primary CTA: **Discuss Managed Website Operations**

5. Agent Workflow Pilot

The advanced offer. It selects one narrow workflow, defines permissions and human controls, measures the baseline and runs a 30-day pilot ending in **fit / expand / not yet**.

Primary CTA: **Assess an Agent Workflow**

Supporting paths

- Website Trust and Continuity Sprint;
- Conversion Improvement Sprint;
- Growth Measurement Programme;
- Kenyan VPS and Data Journey Review;
- Buzz Fit Lab;
- Developer Disappeared Test;
- Invisible Lead Leak Review;
- Restore, Don't Assume Drill.

These are targeted responses, labs or modules. Do not present them as eight equal businesses in the primary navigation.

7. Definitive sitemap

Primary navigation

- 1. **How It Works** - /how-it-works/
- 2. **Solutions** - /solutions/
- 3. **Managed Operations** - /managed-website-operations/
- 4. **Insights** - /insights/
- 5. **About** - /about/

Persistent CTA: **Get Your Readiness Score** - /readiness/

IMPLEMENTATION
BRIEF

8. Global interface copy

8. Global interface copy

Primary CTA labels

- Get Your Digital Readiness Score
- Start My Assessment
- Book the Review
- Plan My Website Revenue System
- Discuss Managed Website Operations
- Assess an Agent Workflow
- Tell Me the Business Problem

Status vocabulary

Use:

- Declared by customer
- Publicly observed
- Manually reviewed
- Directly tested
- Insufficient data
- Not applicable
- Needs evidence

- Human decision required

Avoid:

- Passed/failed when the result is contextual;
- secure;
- compliant;
- guaranteed;
- AI-approved.

Form confirmation

Heading:

Your request has been received.

Body:

We will review the information before recommending a next step. This is not an instant security or compliance assessment. Keep your reference number for any follow-up.

Generic error

Heading:

We could not complete that request.

Body:

Your information has not been submitted successfully. Please review the highlighted fields or try again. If the problem continues, use the contact route shown below.

IMPLEMENTATION
BRIEF

9. Homepage - exact content

9. Homepage - exact content

Route: /

SEO title: **Website Revenue and Digital Readiness in Kenya | Onduu**

Meta description: **Onduu helps established Kenyan businesses find and fix website weaknesses affecting enquiries, trust, control and resilience - then measure what improves.**

Section 1 - Hero

Eyebrow:

DIGITAL PERFORMANCE FOR KENYAN BUSINESSES

H1:

Your website should win customers - not quietly lose them.

Supporting copy:

Onduu finds and fixes the weaknesses costing your business enquiries, trust, speed, control and resilience. Start with a six-part Digital Readiness Score and leave with the three actions that matter most.

Primary CTA: **Get Your Digital Readiness Score**

Secondary CTA: **See What We Check**

Microcopy:

Control | Trust | Speed | Conversion | Resilience | Agent Readiness

Visual instruction: show a refined scorecard labelled **Illustrative sample** with an overall score of 62/100 and three example priorities: enquiry path, recovery proof and mobile speed. Never imply it is a real client result.

Section 2 - Stakes

H2:

A website can look fine while quietly losing business.

Body:

The message may be unclear. The enquiry form may not reach the right person. Email may land in spam. Mobile visitors may wait too long. Nobody may know who controls the domain or analytics. Backups may exist but never have been restored. Marketing may produce traffic without proving which enquiries became useful business.

These are not design preferences. They are failures in a commercial and operational system.

Prompt line:

Which weakness is costing you most - and which one would you never notice until it failed?

Section 3 - Six-part score

H2:

Know exactly where your digital operation is weak.

Intro:

The Onduu Digital Readiness Score examines six connected parts of the system. Each finding shows its evidence source, confidence and limitation.

Card 1:

Control

Know who owns the domain, hosting, website, analytics, email and administrator access - and whether the business can continue when a person or vendor leaves.

Example check: **Can two authorised people recover the registrar account?**

Card 2:

Trust

Check whether customers and partners see credible claims, working HTTPS, responsible privacy handling and well-configured email-domain foundations.

Example check: **Do MX, SPF, known DKIM, DMARC, CAA and DNSSEC records match the approved setup?**

Card 3:

Speed

Understand whether important pages load and respond well on the devices and connections your customers actually use.

Example check: **How does the main landing page perform on a representative mobile test?**

Card 4:

Conversion

Test whether the right visitor understands the offer, trusts the proof, sees the next step and reaches a working response path.

Example check: **Can an authorised test enquiry be traced from page to inbox or CRM?**

Card 5:

Resilience

Establish whether failures are detected, responsibilities are clear and the website can be restored when technology or suppliers fail.

Example check: **When was the last successful restore, and how long did it take?**

Card 6:

Agent Readiness

Determine whether one narrow workflow has suitable data, permissions, human approval, measurement, logs and a safe way to stop.

Example check: **Which action must never happen without a named human approver?**

CTA: **Score My Website**

Section 4 - Method

H2:

Start with evidence. Fix the right problem. Measure what changes.

Step 1:

Score

Establish the baseline across six dimensions using declared answers, safe public observations and human review.

Step 2:

Fix

Prioritise the three weaknesses with the greatest commercial or continuity consequence, then complete the appropriate review or implementation.

Step 3:

Measure

Verify the result in qualified enquiries, performance, ownership, recovery, content usefulness or controlled workflow adoption.

CTA: [See How It Works](#)

Section 5 - Core solutions

H2:

A clear path from diagnosis to continuous improvement.

Card 1:

Digital Revenue and Risk Review

A deeper, paid diagnosis for leadership teams that need evidence, ownership, priorities and a 30/60/90-day corrective plan.

Link: [Explore the Review](#)

Card 2:

Website Revenue System

Clarify the offer, build or improve the website, prove the enquiry path, establish measurement and leave the business in control.

Link: [Plan the System](#)

Card 3:

Managed Website Operations

Keep the website monitored, measurable, on-brand and improving after launch - with concise reporting and a supervised Digital Performance Steward where approved.

Link: [See Managed Operations](#)

Card 4:

Agent Workflow Pilot

Test one narrow workflow with defined permissions, human approval, cost, quality measures and a clear fit/expand/not-yet decision.

Link: [Assess a Workflow](#)

Section 6 - Brand clarity

H2:

Your website should express one strategy - not a collection of disconnected messages.

Body:

Onduu aligns the audience, promise, offer hierarchy, proof, voice, visual rules and calls to action behind the website. The result is a practical source of truth that guides pages, campaigns and content as the business changes.

In Managed Website Operations, a supervised Brand and Content Steward can review new work against that approved strategy, identify contradictions and prepare useful content ideas from real customer questions and commercial priorities.

CTA: See the Website Revenue System

Section 7 - Managed operations and agent

H2:

After launch, the website still needs an owner, a rhythm and a memory.

Body:

Managed Website Operations connects website monitoring, analytics, search performance, enquiries, DNS and email-domain health, brand guidance, content priorities and change history into one operating process.

Where the client and service scope permit it, a dedicated Digital Performance Steward works inside Buzz. The client can ask what changed, what needs attention, what content to develop and which decisions are waiting. The agent explains and prepares; authorised people approve sensitive actions.

Evidence line:

Immediate material alerts. Weekly owner briefing. Monthly operating report. Quarterly Readiness review.

CTA: Discuss Managed Website Operations

Publication gate: hide or label this section as a future pilot until managed-agent services are approved.

Section 8 - Kenyan infrastructure

H2:

Choose where your core workload runs - and know where the rest of your data travels.

Body:

Kenyan VPS infrastructure can support suitable workload placement, operational control and performance objectives. It is one part of responsible data handling, not automatic compliance and not proof that every dependency remains in Kenya.

Onduu helps map the workload and its data journey. Appropriate infrastructure enquiries follow the approved HOSTAFRICA route.

CTA: Explore Kenyan VPS Use Cases

Publication gate: HOSTAFRICA name, claims and destination require approval.

Section 9 - Buzz and agents

H2:

What if your team and its agents worked in the same operating room?

Body:

Buzz is a self-hostable, Nostr-based workspace where people and agents can collaborate in shared channels. Onduu evaluates one real workflow, its permissions, integrations, data boundaries, retention, support and migration gaps.

The answer may be fit, pilot or not yet. Buzz should not be presented as a universal Slack replacement or a compliance guarantee.

CTA: Assess a Buzz Pilot

Section 10 - Evidence

H2:

Show the evidence, including what did not work.

Pre-proof state:

Onduu's first documented studies are in progress. Results will appear here only when the customer has consented and the evidence can be shown responsibly.

Future proof formats:

- before-and-after Readiness scorecards;
- enquiry-path evidence;
- speed and accessibility results;
- restore-test evidence;
- incident timelines;
- conversion experiment baselines;
- agent pilot findings, including failures and corrections.

Do not create fake cards or placeholder testimonials.

Section 11 - Final CTA

H2:

Find the three digital weaknesses worth fixing first.

Body:

Start with a structured score rather than another open-ended sales call.

Primary CTA: **Get Your Digital Readiness Score**

Secondary CTA: **Tell Me the Business Problem**

10. Digital Readiness Score page - exact content

Route: /readiness/

SEO title: **Digital Readiness Score for Kenyan Businesses | Onduu**

Meta description: **Assess website control, trust, speed, conversion, resilience and agent readiness. Receive evidence, limitations and three priorities.**

Hero

Eyebrow:

THE ONDUU DIGITAL READINESS SCORE

H1:

See what your website is costing, risking or leaving unproven.

Body:

The Digital Readiness Score is a human-reviewed business diagnostic. It combines what your team declares, what can be safely observed from the public internet and what Onduu manually verifies.

You receive six dimension scores, evidence labels, limitations and the three actions worth addressing first.

CTA: **Start My Assessment**

Microcopy:

Initial completion time: approximately 5-8 minutes. Do not submit passwords, credentials or sensitive customer data.

Why this exists

H2:

A conventional website audit often checks the page. This checks the operating system around it.

Body:

A fast homepage does not prove the enquiry reaches sales. A backup schedule does not prove a restore works. A DMARC record does not prove every authorised sender aligns. An analytics tag does not prove the business can connect traffic to qualified outcomes.

The Score makes those distinctions visible.

Six dimensions

Use the six card texts from the homepage, expanded with:

- why the dimension matters;

- customer-declared inputs;
- safe public observations;
- manual evidence options;
- what the assessment cannot prove.

Evidence labels

H2:

Know what the finding is based on.

Declared by customer

Information supplied by the business but not yet independently verified.

Publicly observed

Information visible through safe, non-invasive checks of public pages, DNS or performance sources.

Manually reviewed

Evidence reviewed by an Onduu reviewer.

Directly tested

A control observed in a permitted test, such as an authorised enquiry trace or non-production restoration drill.

Output

H2:

A short decision document, not a wall of warnings.

The report contains:

- overall score and descriptive band;
- six dimension scores;
- evidence and confidence for each material finding;
- strengths worth preserving;
- the three highest-priority actions;
- business consequence, effort, recommended owner and next step;
- clear limitations;
- the appropriate next engagement, including "not yet" where applicable.

Limitations

H2:

What this assessment is not.

Body:

The Digital Readiness Score is not a penetration test, vulnerability assessment, legal opinion, compliance certificate, email-delivery guarantee or proof that backups restore. Public observations are limited to what is safely visible. Deeper tests require separate written permission and an agreed scope.

Process

1. **Request** - provide the website, business context and consent.
2. **Answer** - complete the structured questions.
3. **Observe** - approved public observations are gathered where included.
4. **Review** - Onduu checks the evidence and chooses the three priorities.
5. **Receive** - the report is delivered privately with an interpretation route.

Do not promise an instant result. Replace response-time placeholders only after operating capacity is proven.

Assessment form

Fields:

- full name;
- business email;
- company;
- role;
- website URL;
- primary concern: leads / trust / speed / control / recovery / brand / measurement / agents;
- what triggered the need now;
- consent to assessment processing and privacy notice.

CTA: **Submit My Assessment Request**

Final CTA

H2:

Start with the facts you know. We will label what still needs proof.

CTA: **Start My Assessment**

11. How It Works page - exact content

Route: /how-it-works/

SEO title: **How Onduu Improves Website Revenue and Resilience**

Meta description: **See how Onduu scores, prioritises, fixes and operates the website as a measurable business system.**

Hero

H1:

From hidden weakness to measured improvement.

Body:

Onduu begins with the business consequence, not a predetermined website package. We establish what is weak or unproven, fix the priority, assign ownership and measure what changes.

Stage 1 - Score

Establish a baseline across Control, Trust, Speed, Conversion, Resilience and Agent Readiness. Separate customer declarations, public observations and tested evidence.

Customer responsibilities:

- provide accurate business context;
- identify the website and important journey;
- avoid sharing passwords or unnecessary personal data;
- name an authorised decision-maker.

Stage 2 - Review

Where the business needs deeper evidence, the Digital Revenue and Risk Review traces ownership, customer journeys, measurement, continuity and operating responsibilities. The output is a 30/60/90-day plan.

Stage 3 - Fix

Complete the Website Revenue System or the targeted sprint that matches the diagnosis. Do not force every client into a redesign.

Stage 4 - Operate

Managed Website Operations keeps the system monitored, reported and improved. The service works from exceptions and business priorities, not a checklist of busywork.

Stage 5 - Introduce agents carefully

When one workflow is suitable, define what the agent may read, recommend and do; what requires human approval; how quality and cost are measured; and how the workflow is stopped safely.

What the customer receives

- evidence and source labels;
- clear priorities;
- responsible owners;
- implementation scope;
- measurement plan;
- decision and change history;
- concise regular reporting;
- client-owned handover and offboarding materials.

What Onduu will not imply

- that a public scan proves security;
- that a backup exists because a setting says so;
- that traffic equals revenue;
- that Kenyan hosting automatically creates compliance;
- that an agent replaces accountable people;
- that every client needs Buzz or a new website.

Final CTA: **Get Your Digital Readiness Score**

IMPLEMENTATION
BRIEF

12. Solutions hub - exact content

12. Solutions hub - exact content

Route: /solutions/

SEO title: **Website Revenue, Resilience and Managed Operations | Onduu**

Meta description: **Choose the right response after diagnosis: deeper review, website transformation, managed operations or one controlled agent workflow.**

Hero

H1:

Fix the right problem - not simply the visible one.

Body:

A redesign will not solve unclear ownership. More traffic will not solve a broken form. A new agent will not solve an undocumented process. Start with the weakness and choose the response that fits.

Solution cards

Use the five offers in Section 6 with best-fit statements and CTA labels.

Decision guide

- **You do not know what is wrong:** start with the Digital Readiness Score.
- **Leadership needs evidence and a plan:** choose the Digital Revenue and Risk Review.
- **The offer, journey and platform need material work:** choose the Website Revenue System.
- **The website is live but unmanaged:** choose Managed Website Operations.
- **One repetitive process may suit an agent:** choose the Agent Workflow Pilot.

Final CTA: **Start With My Score**

IMPLEMENTATION
BRIEF

13. Digital Revenue and Risk Review page - exact content

13. Digital Revenue and Risk Review page - exact content

Route: /solutions/digital-revenue-risk-review/

SEO title: **Digital Revenue and Risk Review | Onduu**

Meta description: **A paid, evidence-led review of website revenue, ownership, measurement and continuity with a 30/60/90-day plan.**

Hero

Eyebrow:

PAID DIAGNOSIS FOR DECISION-MAKERS

H1:

Know what to fix, who should own it and what happens if you do nothing.

Body:

The Digital Revenue and Risk Review goes beyond the entry score. It examines the commercial journey, asset ownership, measurement, DNS and email foundations, resilience, brand consistency and readiness for controlled automation.

CTA: **Book the Review**

Best fit

- a managing director needs a prioritised plan;
- marketing and IT disagree about the problem;
- the website produces activity but unclear outcomes;
- a rebrand, redesign, supplier change or agent project is being considered;
- ownership, recovery or data-flow questions are unresolved.

Deliverables

- executive scorecard;
- stakeholder interview;
- evidence and limitation register;
- ownership matrix;
- one lead-path trace where authorised;
- brand, message and CTA review;
- DNS/email-domain and operational health review;
- measurement baseline;
- top five business risks/opportunities;
- 30/60/90-day action plan;
- management presentation.

Not included by default

- penetration testing;
- production-form submission without written permission;
- backup restoration without an agreed safe environment;
- legal or compliance certification;
- implementation work beyond the signed scope.

Final CTA: **Discuss the Review**

IMPLEMENTATION
BRIEF

14. Website Revenue System page - exact content

14. Website Revenue System page - exact content

Route: /solutions/website-revenue-system/

SEO title: **Website Revenue System for Established Businesses | Onduu**

Meta description: **Clarify the offer, build the website, prove the enquiry path, establish measurement and leave the business in control.**

Hero

Eyebrow:

THE FLAGSHIP TRANSFORMATION

H1:

Build a website that communicates clearly, captures qualified demand and remains under your control.

Body:

This is not a page-count package. It is a fixed-scope transformation of the strategy, message, customer journey, website, measurement and operating foundations behind an important business outcome.

CTA: Plan My Website Revenue System

What it solves

- unclear audience or offer;
- inconsistent brand and content;
- weak proof and competing CTAs;
- slow or confusing mobile journey;
- unreliable form and follow-up path;
- missing attribution;
- vendor-controlled accounts;
- incomplete handover and recovery information.

Workstreams

Brand Clarity Foundation

Define the audience, buying trigger, position, promise, offer hierarchy, message pillars, proof, voice, visual direction and CTA map.

Customer Journey and Conversion

Design the page sequence and calls to action around the visitor's decision, objections and next step.

Premium Website Build

Create an accessible, fast, responsive website with a maintainable content structure and clear ownership.

Measurement and Lead Path

Implement a documented event taxonomy and verify the route from source through form, notification, CRM and response.

Trust and Continuity Foundation

Record domain, DNS, email, hosting, analytics, administrator, backup, recovery and vendor responsibilities. Fix included priority gaps or assign them transparently.

Launch and Handover

Verify key routes, analytics, performance, accessibility, ownership, rollback and client documentation before release.

What the customer owns

The client should leave with control of its domain, website, analytics, content, records and documented dependencies, subject to third-party licensing and the signed agreement.

Best fit / not fit

Best fit:

- established business with a commercially important website;
- authorised decision-maker;
- willingness to clarify the offer and maintain outcome data;
- need for measurable improvement rather than cosmetic replacement.

Not fit:

- lowest-price page purchase;
- request for unsupported claims or fake proof;
- no responsible owner for enquiries;
- expectation that a website guarantees sales.

Final CTA: **Plan My Website Revenue System**

IMPLEMENTATION
BRIEF

15. Managed Website Operations page - exact content

15. Managed Website Operations page - exact content

Route: /managed-website-operations/

SEO title: **Managed Website Operations and Digital Performance Steward | Onduu**

Meta description: **Keep the website monitored, measurable, on-brand and improving with concise reports, human judgement and a supervised digital steward.**

Publication gate: this commercial offer requires explicit approval under the employment and HOSTAFRICA boundary.

Hero

Eyebrow:

THE WEBSITE AFTER LAUNCH

H1:

A website should be operated - not launched and forgotten.

Body:

Managed Website Operations keeps the commercial journey, brand, measurement, trust foundations and responsibilities visible. Onduu monitors agreed signals, interprets exceptions, supports one improvement cycle at a time and reports what leadership needs to decide.

CTA: **Discuss Managed Website Operations**

What is managed

- important-page and availability signals;
- contact-form and lead-path health;
- GA4 and Search Console trends;
- measurement and connector health;

- DNS, domain and email-domain changes;
- mobile performance and technical regressions;
- brand, message, proof and CTA consistency;
- content opportunities tied to customer needs;
- website change and experiment history;
- ownership, access, recovery and vendor dependencies.

The Digital Performance Steward

H2:

One supervised conversation with the system around your website.

Body:

Each suitable client can receive a dedicated Buzz agent grounded in the approved strategy, evidence and permissions. Ask what changed, which enquiries arrived, what needs attention, what content to develop or which decision is blocking progress.

The Steward can:

- retrieve and explain approved evidence;
- identify material changes and missing data;
- prepare weekly and monthly briefings;
- review content against the brand source of truth;
- propose experiments and content briefs;
- coordinate issues and approvals;
- maintain a non-sensitive decision history.

The Steward does not by default:

- publish;
- contact customers;
- change DNS, production systems or advertising spend;
- expose secrets or unnecessary personal data;
- make legal, compliance or security guarantees;
- take irreversible action.

Reporting rhythm

- immediate P1/P2 exception alerts;
- weekly Executive Website Briefing;
- monthly Digital Performance and Website Operations Report;
- quarterly Readiness and strategy review;
- annual continuity and governance review;
- incident and experiment close-out reports when triggered.

Client lifecycle

Onboarding establishes scope, outcomes, ownership, privacy, access, baselines, brand rules, monitoring and a 30-day shadow period. Offboarding revokes access, disables workflows, exports client-owned knowledge and records retention or deletion.

Best fit

- website matters commercially;
- named owner will act on decisions;
- CRM or lead register can record outcomes;
- leadership values concise evidence;
- the client accepts supervised, least-privilege operation.

Final CTA: **Discuss Managed Website Operations**

IMPLEMENTATION
BRIEF

16. Agent Workflow Pilot page - exact content

16. Agent Workflow Pilot page - exact content

Route: /solutions/agent-workflow-pilot/

SEO title: **Controlled AI Agent Workflow Pilot | Onduu**

Meta description: **Test one narrow business workflow with defined data, permissions, human approval, quality measures, cost and shutdown controls.**

Publication gate: paid managed-agent work requires approval.

Hero

H1:

Do not buy "AI transformation". Test one useful workflow.

Body:

Onduu maps one repetitive process, establishes its human and system boundaries, runs a controlled pilot and measures whether it should expand.

CTA: **Assess an Agent Workflow**

Suitable examples

- prepare a weekly website-owner briefing;
- classify enquiries and draft internal routing notes;
- turn approved evidence into content briefs and drafts;
- watch important public website journeys and create actionable alerts;
- maintain a non-secret ownership and dependency register;
- assemble evidence for a Readiness review;
- coordinate an incident timeline.

Pilot design

1. map the current workflow and baseline effort;
2. define permitted data and prohibited data;
3. define tools and least-privilege access;
4. mark human approvals and irreversible actions;
5. define quality, cost, latency and failure measures;
6. test prompt injection and data leakage;
7. run read-only/draft-only first;
8. decide **fit / expand / not yet**.

Deliverables

- workflow map;
- permission and authority matrix;
- data and privacy map;
- agent operating charter;
- evaluation fixtures;
- incident and shutdown process;
- 30-day result;
- expansion or stop recommendation.

Final CTA: **Assess an Agent Workflow**

IMPLEMENTATION
BRIEF

17. Kenyan Infrastructure hub - exact content

17. Kenyan Infrastructure hub - exact content

Route: /infrastructure/

SEO title: **Kenyan Infrastructure and Digital Workload Planning | Onduu**

Meta description: **Map where a workload runs, where its data travels and which infrastructure responsibilities must be controlled.**

Publication gate: approve HOSTAFRICA relationship and routing copy.

Hero

H1:

Infrastructure should follow the workload, responsibility and evidence.

Body:

Onduu helps businesses map what the website or agent needs, where data and dependencies travel, who operates each layer and which Kenyan infrastructure options may fit. HOSTAFRICA supplies and supports infrastructure through the approved commercial route.

Principles

- local workload placement can support particular operational and performance goals;
- it does not automatically create compliance;
- a local server does not prove every dependency or backup stays local;
- responsibility, access, recovery, support and total operating cost matter;
- infrastructure recommendations must follow the application and data map.

Cards:

- **Kenyan VPS and Data Location** - map the workload, dependencies and responsibilities.
- **Buzz and Agent Collaboration** - assess the workspace, relay, identities, retention, integrations and support model.

Final CTA: **Map My Workload**

IMPLEMENTATION
BRIEF

18. Kenyan VPS and Data Location page - exact content

18. Kenyan VPS and Data Location page - exact content

Route: /infrastructure/kenyan-vps-data-location/

SEO title: **Kenyan VPS and Data Location Planning | Onduu**

Meta description: **Assess workload fit, dependencies, performance, operations, backups and data journeys before choosing Kenyan VPS infrastructure.**

Hero

H1:

Choose where your core workload runs. Map where the rest of its data travels.

Body:

A Kenyan VPS may suit websites, applications, agents or collaboration services that benefit from particular location, control or performance objectives. The decision still depends on architecture, data flow, security, backup, support and cost.

Review questions

- What is the workload and who uses it?
- Which data enters, leaves or is replicated?
- Which CDN, DNS, analytics, email, model, storage and backup services remain external?
- What latency, availability and recovery objectives matter?
- Who patches, monitors, backs up and restores the system?
- What happens when the operator or supplier changes?
- Which legal or sector requirements need independent review?

Output

- workload and dependency map;
- data-journey diagram;
- responsibility matrix;
- performance and recovery objectives;
- operating-cost estimate;
- fit / pilot / alternative recommendation;
- approved HOSTAFRICA handoff where appropriate.

CTA: **Talk to HOSTAFRICA About This Workload**

Do not activate the CTA until the destination and consent wording are approved.

IMPLEMENTATION
BRIEF

19. Buzz and Agent Collaboration page - exact content

19. Buzz and Agent Collaboration page - exact content

Route: /infrastructure/buzz-agent-collaboration/

SEO title: **Buzz Human-Agent Collaboration Assessment | Onduu**

Meta description: **Evaluate one human-agent workflow in Buzz, including channels, identities, data, permissions, integrations, retention and support.**

Hero

H1:

Give people and agents one place to work - after proving the workflow fits.

Body:

Buzz is a self-hostable, Nostr-based workspace where people and agents can collaborate in channels. Onduu assesses one real operating need before recommending a pilot.

What the assessment covers

- the human workflow and business outcome;
- channel and membership design;
- agent identity and permissions;
- relay and hosting responsibilities;
- data sensitivity and retention;
- integrations and connector gaps;
- audit, backup and recovery expectations;
- migration from email, WhatsApp, Slack or Teams;
- support, upgrade and incident ownership;
- pilot cost and success measures.

Honest limitations

Buzz should be treated as an evolving platform. The deployed version, approval enforcement, export, retention, security and operational behaviour must be tested before contractual promises are made. It is not presented as an unconditional replacement for every Slack or Teams workflow.

Result

Fit - the workflow and controls are suitable.

Pilot - a limited test is justified.

Not yet - keep the current tools and fix process, data or control gaps first.

CTA: Assess a Buzz Pilot

IMPLEMENTATION
BRIEF

20. Labs and Tools page - exact content

20. Labs and Tools page - exact content

Route: /labs/

SEO title: Onduu Digital Readiness Labs and Tools

Meta description: Practical tests for website ownership, lead leakage, recovery, data journeys and controlled agent adoption.

Hero

H1:

Practical tests for the failures businesses rarely see in time.

Body:

Onduu Labs turn common hidden weaknesses into structured, permission-based tests. Each tool explains what it can observe, what requires evidence and what it cannot prove.

Lab cards

Developer Disappeared Test

Could the business renew, update, revoke, restore and move its website if the responsible person disappeared tomorrow?

Invisible Lead Leak Review

Trace one enquiry from source through page, form, inbox or CRM, response and outcome.

Restore, Don't Assume Drill

Restore an approved backup into a safe environment, record the time and identify missing dependencies.

Kenyan Data Journey Map

Show where website, form, analytics, email, backup, CDN and agent data travels.

Brand Consistency Review

Compare pages and content against the approved audience, promise, offer, voice, evidence and CTA system.

Agent Readiness Workshop

Determine whether one workflow has appropriate data, permissions, human review, cost and recovery.

CTA: Start With the Readiness Score

Phase instruction: list labs at launch if useful, but do not build interactive automation until the core assessment and manual service are proven.

IMPLEMENTATION
BRIEF

21. Results page - exact content

21. Results page - exact content

Route: /results/

SEO title: **Onduu Results and Evidence**

Meta description: **Documented website, continuity, measurement and agent-pilot results, published only with evidence and consent.**

Pre-evidence state

H1:

Evidence is being built before claims are made.

Body:

Onduu will publish results only when the customer has consented, the baseline is known and the method and limitations can be shown. The first studies will include enquiry-path checks, restoration drills, conversion changes, data-journey maps and supervised Buzz pilots.

CTA: Volunteer for a Friendly-Company Pilot

Hide this page from the primary navigation until at least one approved study exists.

Future case-study template

- business context;
- original problem;
- baseline and evidence source;
- constraints;
- intervention;
- what changed;
- what did not work;

- measured result and timeframe;
- limitation;
- client consent state;
- next action.

IMPLEMENTATION
BRIEF

22. Insights page - exact content

22. Insights page - exact content

Route: /insights/

SEO title: **Website Revenue, Resilience and Agent Operations Insights | Onduu**

Meta description: **Evidence-led guidance for Kenyan business leaders on conversion, digital control, infrastructure and supervised agents.**

Hero

H1:

Evidence for better digital decisions.

Body:

Practical field guides, tests and operating lessons for leaders responsible for websites, enquiries, domains, recovery, infrastructure and agents.

Editorial pillars

1. Websites that win customers - 40%.
2. Digital control and continuity - 25%.
3. Kenyan infrastructure and data journeys - 20%.
4. Buzz and agent-ready operations - 15%.

First twelve article titles

1. **Would Your Business Survive If Its Web Developer Disappeared Tomorrow?**
2. **The Contact Form Can Work and Still Lose the Lead**
3. **A Backup Is Not Recovery Until You Restore It**
4. **What SPF, DKIM and DMARC Can - and Cannot - Prove**
5. **Why More Website Traffic May Not Produce More Qualified Enquiries**
6. **The Five-Second Test for a Business Website's Main Promise**
7. **Where Does Your Kenyan Website's Data Actually Travel?**
8. **When a Kenyan VPS Is a Good Fit - and When It Is Not**
9. **What a Managing Director Needs in a Monthly Website Report**
10. **How to Keep Content On-Brand Without Turning It Into Generic AI Copy**
11. **The First AI Agent Workflow a Business Should Test**
12. **Buzz, Slack or Not Yet? A Practical Workflow Decision**

Article template

- buying trigger or customer question;
- clear thesis;
- evidence or demonstration;
- checklist or framework;
- practical example;
- limitation or counterpoint;
- next action;
- contextual CTA;
- sources and reviewed date.

IMPLEMENTATION
BRIEF

23. About page - exact content

23. About page - exact content

Route: /about/

SEO title: **About Onduu and Wycliffe | Digital Readiness in Kenya**

Meta description: **Onduu combines commercial website thinking, digital infrastructure experience and evidence-led operating methods for Kenyan businesses.**

Hero

H1:

A practical view of the whole digital system.

Body:

Onduu exists because a business website is rarely only a design problem. It sits inside domains, hosting, email, analytics, customer journeys, suppliers, recovery processes, content decisions and, increasingly, agent workflows.

Guide statement

Wycliffe brings experience across websites, domains, hosting, digital operations and Kenyan business infrastructure. Onduu turns that perspective into structured diagnosis, implementation and operating evidence.

Publication rule: replace this paragraph with verified biography details only after the owner approves the exact facts, dates, titles and current relationship wording.

Operating principles

1. **Evidence before confidence.** Label what was declared, observed, reviewed and tested.
2. **Business consequence before technical theatre.** Explain why the issue matters.
3. **Client control before dependency.** Leave ownership and handover clearer.
4. **One priority before ten activities.** Focus effort where it changes the outcome.

5. **Human judgement before autonomous action.** Use agents within explicit boundaries.
6. **Kenyan context without false localisation claims.** Map the full data and supplier journey.

Relationship disclosure preview

Onduu is Wycliffe's independent professional platform. Wycliffe is Managing Director of HOSTAFRICA Kenya. HOSTAFRICA provides and supports infrastructure products referenced on this site. Onduu's separately contracted website and digital-performance services are independent and offered only within approved professional boundaries.

This copy must remain unpublished until approved.

CTA: **See How the Review Works**

IMPLEMENTATION
BRIEF

24. Contact page - exact content

24. Contact page - exact content

Route: /contact/

SEO title: **Discuss a Website Revenue or Readiness Problem | Onduu**

Meta description: **Tell Onduu what the website should achieve, what is failing and what triggered the need now.**

Hero

H1:

Tell me the business problem - not the number of pages.

Body:

Share the result the website or workflow should produce and the weakness you suspect. Onduu will review the request and recommend a score, review, system, managed programme, pilot or "not yet".

Form fields

- full name;
- business email;
- company;
- role;
- website URL;
- what business result should the website or workflow produce?;
- which issue is most urgent: leads / trust / speed / control / recovery / brand / measurement / data location / agents?;
- what triggered the need now?;
- who currently manages the website and infrastructure?;
- what is the consequence if nothing changes in the next six months?;

- is this mainly a website project, infrastructure enquiry, agent workflow, or a combination?;
- consent checkbox and privacy link.

CTA: **Submit My Request**

Routing rule: infrastructure interest remains pending review. Do not automatically send the lead to an external destination in the MVP.

IMPLEMENTATION
BRIEF

25. Legal page content requirements

25. Legal page content requirements

These pages require professional review. The development LLM should implement the routes, layouts and clearly marked draft content without inventing legal conclusions.

Commercial Relationships

Route: /legal/commercial-relationships/

Cover:

- Onduu identity and ownership;
- Wycliffe's current HOSTAFRICA role;
- which services Onduu contracts independently;
- which infrastructure services HOSTAFRICA contracts and supports;
- how referrals and attribution work;
- conflicts and disclosures;
- contact for questions.

Privacy

Route: /legal/privacy/

Cover:

- controller/processor identity by purpose;
- information collected;
- purpose and lawful basis;
- analytics and cookies;
- assessment data;
- processors and model providers;
- data locations and transfers;
- retention;
- security approach;
- data-subject rights and contact route;
- consent withdrawal;
- complaint route;
- version and effective date.

Assessment Terms

Route: /legal/assessment-terms/

Cover:

- permitted public observations;
- customer authority to submit the domain;
- prohibited use;
- distinction among declaration, observation, review and test;
- no penetration test, compliance certificate or guarantee;
- report confidentiality and access;
- retention;
- correction process;
- intellectual property and limitations.

Managed Service Terms

Route: /legal/managed-service-terms/

Cover:

- included systems and monitored journeys;
- support hours and escalation;
- reporting cadence;
- approval and authority matrix;
- availability and remediation limitations;
- client responsibilities;
- access and security;
- model and agent limitations;
- incident and breach responsibilities;
- pricing and out-of-scope work;
- termination, export, retention, deletion and offboarding.

IMPLEMENTATION
BRIEF

26. Content and SEO model

26. Content and SEO model

Every indexable page requires:

- unique title;
- meta description;
- one clear H1;
- canonical URL;
- Open Graph title, description and image;
- appropriate internal links;
- contextual CTA;

- accurate structured data only;
- reviewed date where claims can become stale.

Every insight record requires:

- title;
- description;
- pillar;
- author;
- published date;
- reviewed date;
- evidence/source list;
- CTA destination;
- draft state;
- optional methodology and limitation.

Do not publish rating/review schema without eligible evidence. Provide sitemap, robots policy, RSS feed and a useful 404.

IMPLEMENTATION BRIEF

27. Visual direction

27. Visual direction

Visual identity

Editorial Precision - a premium research publication combined with a disciplined diagnostic product.

Colour tokens

```
:root {
  --colour-carbon: #101820;
  --colour-ivory: #F5F1E8;
  --colour-copper: #B8643B;
  --colour-green: #2F6B5B;
  --colour-slate: #60707C;
  --colour-mist: #DDE3E1;
  --colour-ochre: #B8862D;
  --colour-white: #FFFFFF;
}
```

Verify every actual text/background combination to WCAG AA. Colour never communicates status alone.

Typography

- Newsreader for display headings and occasional pull quotes;
- Manrope for body, navigation, UI, forms and data;
- self-host licensed WOFF2 files;
- body measure approximately 68-74 characters.

Layout

- twelve-column desktop grid;
- single-column mobile flow;

- disciplined whitespace;
- thin borders, modest radii and minimal shadows;
- scorecards, evidence panels, matrices and diagrams over decorative graphics;
- original Kenyan business photography only when it adds real context;
- subtle purposeful motion with reduced-motion support.

Avoid stock handshakes, skylines, server racks, shields, locks, AI brains, globes, gradients and generic African-tech imagery.

Logo

Use a clean text wordmark component until the custom **Open Signal** mark is approved. Do not generate the permanent logo inside the web build.

IMPLEMENTATION
BRIEF

28. Technical build brief

28. Technical build brief

Recommended stack

- Astro with the official Cloudflare adapter;
- Cloudflare Workers and Static Assets;
- D1 for leads, consent, assessment requests and later observations/reports;
- Turnstile with mandatory server-side Siteverify;
- Workers Rate Limiting for protected routes;
- Astro content collections for insights;
- Cloudflare Web Analytics for an initial privacy-conscious baseline;
- structured redacted observability;
- Queues, Browser Rendering and R2 only after the manual workflow is proven.

Use current official documentation and the installed Wrangler version before implementation. Do not create production resources or deploy without approval.

Public routes

Pre-render public marketing and editorial routes. Render assessment, form, private report and API routes on demand where Worker bindings are required.

Form requirements

- semantic labels and instructions;
- server-side schema validation;
- server-side Turnstile verification;
- field length limits and allowlists;
- prepared D1 queries;
- accessible error summary and focus movement;
- loading, success, rate-limit, server-error and safe-retry states;
- no PII in logs or analytics;

- generic success response and reference ID;
- no automatic infrastructure referral.

Security and privacy

- separate preview and production bindings;
- secrets outside git and browser bundles;
- CSP and appropriate security headers;
- safe URL validation;
- rate limits;
- redacted structured logs;
- no raw scan dumps or sensitive form bodies in D1;
- retention documented before production;
- threat model for forms, assessment manipulation, referrals and admin access.

Accessibility and performance

- target WCAG 2.2 AA;
- keyboard-operable navigation and forms;
- visible focus;
- semantic heading order and landmarks;
- errors associated with fields;
- no status conveyed by colour alone;
- reduced-motion support;
- minimal client JavaScript;
- responsive images with explicit dimensions;
- representative mobile targets: LCP <= 2.5 seconds, CLS <= 0.1, INP <= 200 ms, treated as test targets rather than public claims.

IMPLEMENTATION
BRIEF

29. Minimum viable release

29. Minimum viable release

Must ship

- Home;
- Digital Readiness Score explainer and request flow;
- How It Works;
- Solutions hub;
- Digital Revenue and Risk Review;
- Website Revenue System;
- Managed Website Operations preview or hidden gated route;
- Agent Workflow Pilot preview or hidden gated route;
- Kenyan Infrastructure hub and two child pages, subject to approval;

- Insights index and article template;
- three cornerstone articles;
- About;
- Contact;
- Commercial Relationships, Privacy, Assessment Terms and Managed Service Terms drafts;
- accessible 404;
- sitemap and RSS.

Do not build in phase one

- automated external scanner;
- instant score;
- autonomous publishing or production changes;
- customer portal;
- complex dashboard;
- universal connector marketplace;
- live CRM or external referrals;
- high-volume crawling;
- private report links;
- PDF report automation;
- industry benchmark;
- fabricated case-study section.

IMPLEMENTATION BRIEF

30. Three cornerstone articles for launch

30. Three cornerstone articles for launch

Article 1

Title: **Would Your Business Survive If Its Web Developer Disappeared Tomorrow?**

Purpose: introduce Control and Resilience.

CTA: **Get Your Digital Readiness Score**

Article 2

Title: **The Contact Form Can Work and Still Lose the Lead**

Purpose: introduce Conversion, measurement and lead-path testing.

CTA: **Explore the Digital Revenue and Risk Review**

Article 3

Title: **What SPF, DKIM and DMARC Can - and Cannot - Prove**

Purpose: introduce Trust, DNS/email health and evidence limitations.

CTA: **Get Your Digital Readiness Score**

Each article requires citations, reviewed date, limitation and one practical checklist.

**IMPLEMENTATION
BRIEF****31. Acceptance criteria for the implementation LLM**

31. Acceptance criteria for the implementation LLM

The work is not complete until:

Strategy and content

- this sitemap and offer hierarchy are implemented;
- the homepage preserves the customer as hero and Onduu as guide;
- one primary Readiness funnel is dominant;
- all CTA labels and destinations work;
- gated claims and routes remain unpublished until approved;
- no placeholder proof appears real;
- British/Kenyan English is used consistently.

UX and brand

- Editorial Precision is consistent across mobile, tablet and desktop;
- the scorecard is labelled Illustrative sample;
- the text logo is replaceable;
- every form state exists;
- no essential content depends on colour, hover or motion.

Engineering

- preview and production resources are separate;
- migrations are versioned and tested;
- Turnstile is verified server-side;
- schemas, prepared queries and safe logging are used;
- no PII is placed in analytics or logs;
- build, lint, type checks, full tests and end-to-end funnel tests pass;
- deployment and rollback instructions exist.

Accessibility and performance

- automated accessibility checks pass;
- key flows receive manual keyboard review;
- contrast is verified;
- representative mobile performance is tested;
- any target deviation is documented.

Operations

- README covers setup, bindings, migrations, testing and deployment;
- content guide covers frontmatter, citations, review dates and CTAs;
- data inventory and retention note exists;
- deployment and recovery runbook exists;
- no production deployment or external communication occurs without owner approval.

IMPLEMENTATION BRIEF

32. Instructions for the implementation LLM

32. Instructions for the implementation LLM

Give the LLM this document and use the following prompt first:

Read

ONDUU_DEFINITIVE_WEBSITE_CONTENT_AND_LLM_BUILD_BRIEF_2026_08_15.md **completely. Then inspect the target repository and every applicable AGENTS.md or project instruction. Do not edit files yet. Report the current stack, git/worktree state, existing work that must be preserved, conflicts with this brief, missing owner decisions, security/privacy risks and the smallest complete phase-one vertical slice. Verify current Astro, Cloudflare Workers, D1, Turnstile and Wrangler requirements from official primary documentation. Propose a file-level implementation plan, data migrations, routes, components, tests, validation commands and approval gates. Do not deploy, create production resources, publish gated claims, send real email, connect external CRM systems or transmit customer data.**

After the owner approves the plan:

Implement only the approved phase-one scope from

ONDUU_DEFINITIVE_WEBSITE_CONTENT_AND_LLM_BUILD_BRIEF_2026_08_15.md. **Preserve unrelated work and use a non-default worktree. Build the content, routes, design system, accessible assessment request, preview D1 migration, server validation, Turnstile Siteverify, safe logging, security headers and documented analytics events. Keep all HOSTAFRICA, managed-agent, pricing, biography and legal placeholders gated as specified. Do not deploy or create production resources. Run the complete relevant test suite and report the exact commit state, changed files, verification evidence, unresolved placeholders and next approval gate.**

For the final review:

Review the implementation from a fresh frame against every acceptance criterion in the definitive brief. Do not edit during the first pass. Report defects in priority order with exact file references. After approval, fix the defects, run the full relevant checks and produce the final preview handoff.

IMPLEMENTATION
BRIEF

33. Owner decisions still required

33. Owner decisions still required

1. Confirm target repository and whether any current scaffold must be preserved.
2. Approve exact employment and HOSTAFRICA boundaries.
3. Approve public relationship wording and referral path.
4. Approve biography facts.
5. Approve whether Managed Website Operations and Digital Performance Steward appear at launch or remain hidden preview routes.
6. Approve whether Agent Workflow Pilot appears at launch.
7. Choose assessment response commitment.
8. Choose booking and contact destination.
9. Approve assessment rubric, privacy retention and legal drafts.
10. Approve logo direction and production font licensing.
11. Approve first three articles and named author.
12. Approve pilot application wording and capacity.

IMPLEMENTATION
BRIEF

34. Final implementation principle

34. Final implementation principle

The website must make one journey unmistakable:

Find the weakness. Fix the priority. Operate the system. Measure the result.

Buzz, agents, Kenyan infrastructure, analytics and technical tools support that journey. They must never overwhelm the commercial promise.

The completed website should leave the right visitor thinking:

Onduu understands the website as a business system, can show me what is weak, will tell me what it cannot prove, and has a disciplined way to keep improving it after launch.
